HOW TO USE THIS GUIDE

- Matrix shows hand signals used to get on a taxi from point A to point B
- The signals indicate your destination, or taxi route you will like to follow
- Taxis stop to a hand signal that indicates the taxi's route
- Signal number 1, is used to stop taxis operating locally e.g. Alex to Alex

GENERAL TAXI INFORMATION

- Majority of Minibus taxis are designed to carry 15 passengers seated and some carry 10 passengers seated
- New designed taxis are to carry 18 and 24 passengers seated
- No taxi is allowed to carry more than the designed number of passengers
- The capacity of each taxi is shown on the windows

TAXI FARES

- Taxi fares are set per route and not in kilometers or time traveled (Petrol price influences taxi fares)
- Children under the age of three do not pay and they are not counted as seated passengers
- If luggage is stored on the seat the owner pays for that seat
- Payments made in transit. Payment should be made using small change or R10/R20 denominations preferably

SEATING ARRANGEMENTS

- Front seats and seats immediately behind the driver are reserved for people with disabilities or for people carrying large amounts of hand luggage. All other seats must be occupied before these seats are taken.
- Passengers in the front seat help the driver count fares and give change. Passenger sitting next to the sliding passenger door must open and close the door for passengers boarding or alighting the taxi.
- Passengers must tell the driver where one is getting off a few meters away, identifying the place by street, bus stop or land mark.
